

wherein each of the blister cavities being opened to expose the composition therein by a method characterized by tearing away a portion of the barrier strip to expose each of the notch cavities, peeling the backing layer away from the barrier strip and towards the composition to expose the lidding layer, and pushing the composition from the blister cavities layer through the lidding layer thereby rupturing the lidding layer to expose the composition.--; and

--26. (New) The blister package according to Claim 25, wherein the olefinic copolymer is selected from ethylene-vinyl acetate, ethylene-acrylic acid, ethylene-ethyl acrylate, blends thereof, and polyamides, polypropylene, polyacetal, polybutylene terephthalate, polyethylene terephthalate, nylons, and polyesters.--

REMARKS

Claims 1 through 26 are presently in the case. Claims 1 through 24 have been allowed, and Claims 25 and 26 are new. Claim 25, in addition to claiming the features of Claim 12, incorporated the polymeric materials of construction of the blister layer, i.e. low density polyethylene and olefinic copolymers. Claim 26 further limits and recites the olefinic copolymer suitable for the blister layer. No new subject matter has been added to the claims by these additions. Antecedent basis for the claims may be found on page 11, lines 23 through 29 of the specification.

CONCLUSION

Reconsideration and allowance of Claims 1 through 26, all the claims in the case are earnestly requested. Additional fees for this RCE and 2 new claims are included herewith. If additional fees are due, the Examiner is authorized to deduct said fees from Deposit Account No. 13-2755.

Should the Examiner have any questions or wish to discuss the case, she is requested to contact Applicants' undersigned representative at her earliest convenience.

Respectfully submitted,

By:
